Cost to company	Best in industry

Role description

The PostgreSQL database developer is responsible for developing database code. This is a central role in our development team that will build effective APIs that access and manipulate very large datasets, many of them geospatial, working with product managers, front end developers, GIS analysts and DBAs as needed.

Responsibilities:

- Implement and maintain database code in the form of stored procedures, scripts, queries, views, triggers, etc.
- Owning all Postgres database architecture and design
- Owning all Postgres database production and non-production implementation to ensure performance, stability, and scalability. Establishing all Postgres support processes and standards.
- Creating appropriate scripts/code for production and non-production Postgres DB updates
- Work with front end developers to define simple yet powerful APIs.
- Work with GIS analysts to implement geospatial processes, queries and reports.
- Work with DBAs to ensure efficiency of database code, integrity of data structures and quality of data content.
- Work with product managers to ensure database code meets requirements.
- Review the existing Postgres implementation and propose/implement improvements

Critical skills required:

- 3+ years working as a database developer working with PostgreSQL
- Expert Level SQL, PL/pgSQL, including stored procedures, functions, triggers, and views.
- Knowledge of JSON and PostgreSQL support for JSON.
- PostGIS proficiency and grasp of core geospatial concepts.

- Ability to efficiently write database code without compromising data quality, privacy or security.
- Knowledge of database design principles, query optimization, index management, integrity checks, statistics and isolation levels
- Able to handle multiple tasks in a fast paced environment

Company Profile –

Nascent Info Technologies, an Ahmedabad based CMMI Dev Level 3 certified IT / ITeS company which delivers intelligent software solutions to its reputed Government and Enterprise/Corporate clients.

We specialize in the business of providing services like Software design and development, product planning and development, mobile apps development, datacentre management, datacentre consultancy and technical support, GIS application development and deployment as well as Digital/New Media marketing campaign management.

We mainly develop our solutions on PHP, Java, Angular, Ext JS, Android, iOS and GIS open source technologies. As of now, Nascent has developed wide ranges of Web and Mobile applications for travellers, book readers, education, city traffic, comprehensive apps for conducting survey and integrated apps for ERP as well as decision making mobile apps for tourism. We are also developing GIS based web applications for urban development authorities and municipal corporations.

At Nascent 'Everything we do, we believe there is always a new way of looking at something, beyond the rules'. We nurture 'Creativity and Innovation' in whatever we do which ultimately simplifies our solutions that has potential to make difference in people's lives.
